

Introduction

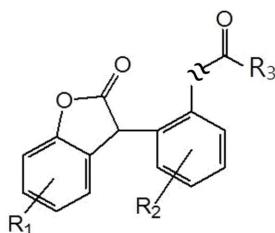

Revonox® 501 belongs to the benzofuranone family, and optimally combines carbon-centered radical scavenger and primary antioxidant function in one molecule. Being a multi-functional antioxidant, Revonox® 501 provides outstanding performance in a variety of polymers such as PP, PE, PBT, styrenics and adhesives, especially for engineering plastics. Its superior effectiveness over conventional antioxidant systems is particularly pronounced in improved melt flow index (MFI) control, good color maintenance, and long-term thermal stabilization.

Applications

Revonox® 501 can be applied as a high efficient melt processing stabilizer system in polyolefins, styrenics and olefin-copolymers. Revonox® 501 can be blended with hindered phenolic and phosphate-based antioxidants to provide synergistic effect. A dosage of Revonox® 501 as low as 50-100 ppm secures a stable MFI performance, along with reduced yellowing.

Chemical Information

Structure

CAS No. Proprietary

Physical Data

Odor	: Odorless
Specific gravity	: 1.086 @ 20°C
Bulk density	: 0.56 g/cm³

Specification

Appearance	: White crystalline powder
Assay	: 98% min.
Melting point	: 183°C min.
Volatile	: 0.5% max.
Transmittance (0.5g in 10ml Toluene)	: 97% min. @ 460nm 98% min. @ 500nm

Solubility (g in 100ml solvent @ 25 °C)

Toluene	: 25
Acetone	: 35
Ethyl Acetate	: 25
Dicholomethane	: >50
Water	: <0.2

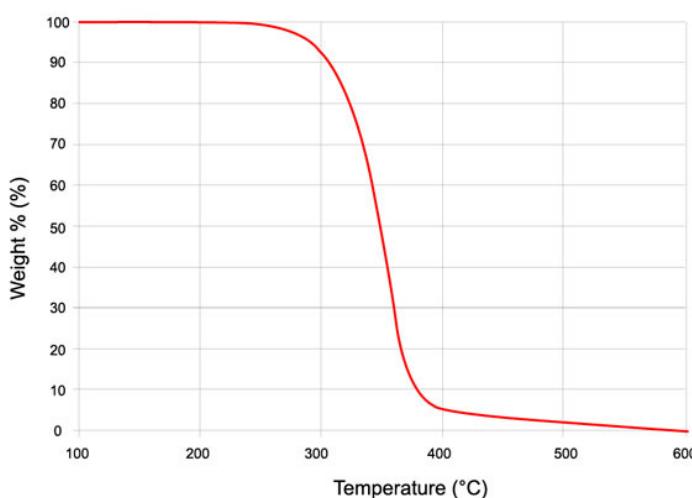

Patent Numbers

US	8840810 B2
EP	2500341 B1
TW	I403507 B
JP	5280501 B2
CN	102675269 B
KR	101338786 B1

Packaging

20 Kg net / Carton box
